API Access Management

Your custom apps are increasingly modern with an API backend. Secure
enterprise data and enable developers to focus on the user experience.

2

weeks of developer time saved per year

2

days saved of writing code for authorization
policy per app / API pair

100%

reduction in the chance of a data breach from exposed APIs

OAuth 2.0 API Authorization

Complete standard-compliant support for OAuth 2.0.

Identity-driven Policy Engine

Control access for any type of user or service in one place.
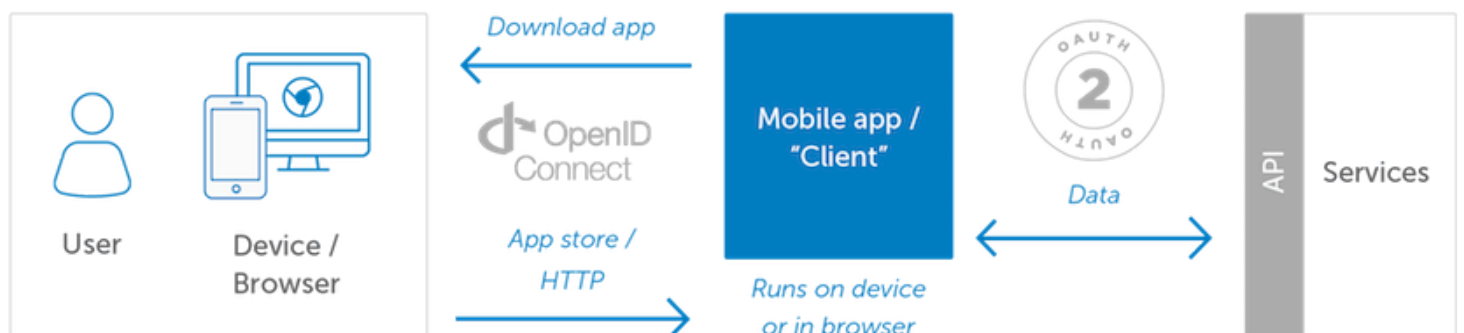

Centralized API Administration

Create, maintain, and audit API access policies.

OAuth 2.0 API Authorization

Complete standard-compliant support for OAuth 2.0.

Designed for modern web and mobile applications, and service-to-service scenarios

Proven compatibility with 3rd party API management solutions

Configurable policy

Create, maintain, and audit code instead of using custom code (XML) for policy

Tie to identity

Okta instantly revokes user's API access tokens based on user state

API flexibility

Avoid securing APIs behind your gateway or additional gateway instances
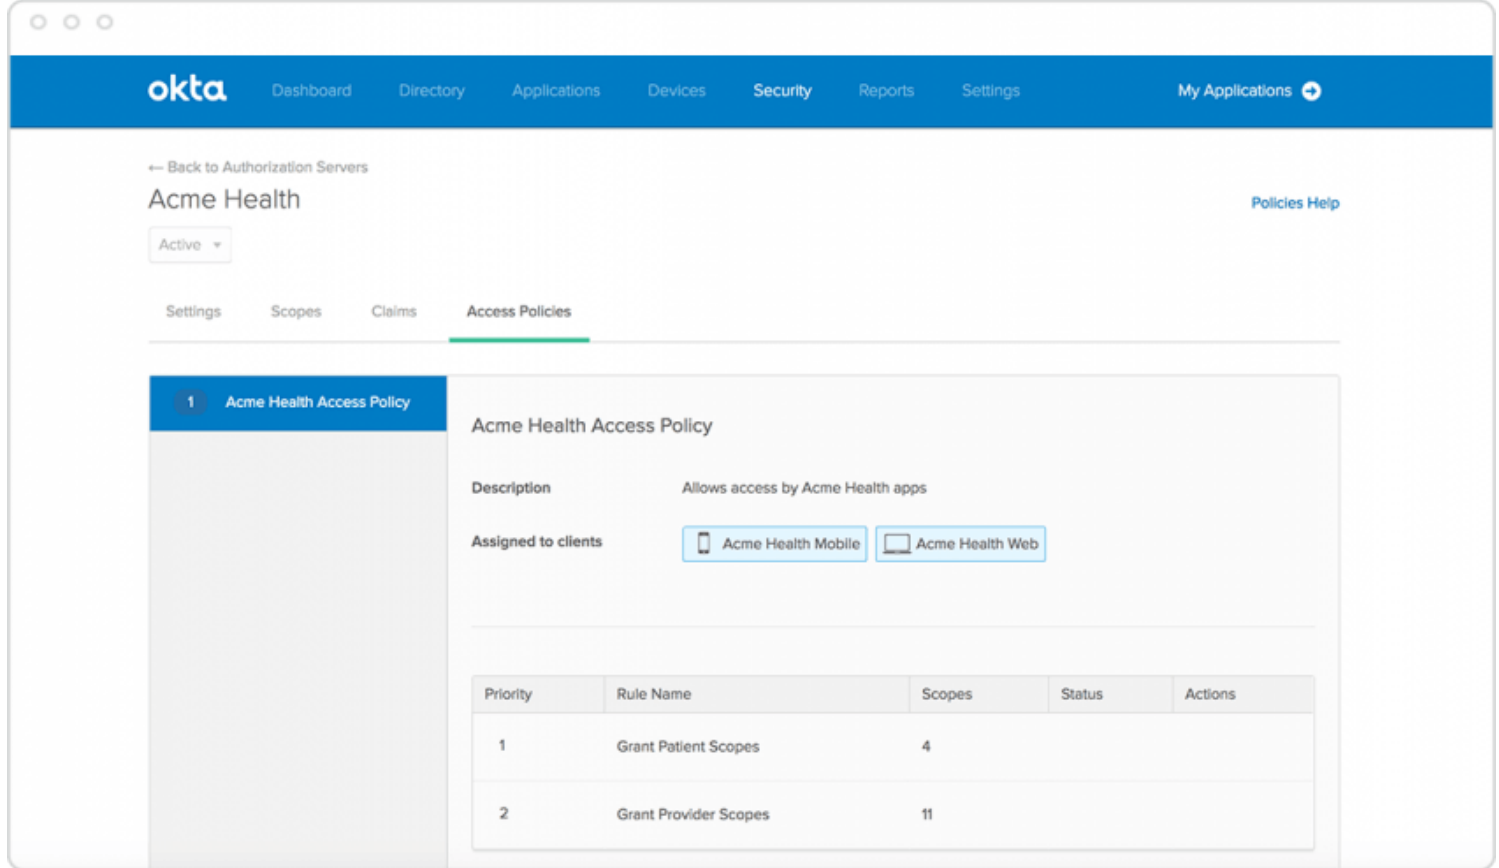

Centralized authorization

CISOs can control security across multiple app development teams, gateway vendors, or instances.

Identity-driven Policy Engine

Control access for any type of user or service in one place.

Easily configure access policies and authorization to API resources.

Flexible policies that define access based on user profile, groups, network, client, and consent

Instant access revocation or updates to user permissions based on user profile and status

Centralized API Administration

Create, maintain, and audit API access policies.

Protect an unlimited number of API resources, behind any API gateway

Purpose-built, user-friendly console for consistent creation, maintenance, and audit of API access policies based on native identity objects without any custom code.
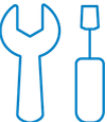

Secure Access to APIs for a Variety of Use Cases

Building Apps for End-users

Internal app developers can build that access backend APIs while 3rd party developers can build apps against your APIs.

Integration to 3rd Parties

Enable customers and partners to programmatically access data via API, or kick off a workflow, and secure access to APIs.

Microservices Backend

Break apart backend
systems to innovate more
quickly and secure access
between microservices.

API Access Management

$2 per month, per user
